

EXPERIMENT NO.4

CODE:

```
//parent class
class BankAccount {
    public accountHolder: string;
    private balance: number;
    protected accountNumber: number;

    constructor(accountHolder: string, balance: number, accountNumber: number) {
        this.accountHolder = accountHolder;
        this.balance = balance;
        this.accountNumber = accountNumber;
    }

    //Public method
    public showAccountDetails(): void {
        console.log("Account Holder :", this.accountHolder);
        console.log("Balance :", this.balance);
        console.log("Account Number :", this.accountNumber);
    }
}

//Child class
class SavingsAccount extends BankAccount {
    constructor(accountHolder: string, balance: number, accountNumber: number) {
        super(accountHolder, balance, accountNumber);
    }

    public showSavingsDetails(): void {
        console.log("\nSavings Account Details");
        console.log("Account Holder :", this.accountHolder); // public
        console.log("Account Number :", this.accountNumber); // protected
        // console.log(this.balance); // error: private member
    }
}

//Object Creation
let customer = new SavingsAccount(" RUDRA ", 1.0000, 123456789);
```

```
customer.showAccountDetails();
customer.showSavingsDetails();

console.log("\nAccessing Public Member:");
console.log(customer.accountHolder);

//console.log(customer.accountNumber); // error (protected)
//console.log(customer.balance);      // error (private)
```

OUTPUT:

Output:

```
Account Holder : RUDRA SHIRODKAR
Balance : 10000
Account Number : 134257689
```

Savings Account Details

```
Account Holder : RUDRA SHIRODKAR
Account Number : 134257689
```

```
Accessing Public Member:
RUDRA SHIRODKAR
```
